DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 7-9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Chin et al. (US 6,844,814).

Regarding claim 1: Chin et al. disclose a wireless sensor apparatus comprising using at least one mobile data collector (21), having mobility that is unpredictable to wireless sensor network (10), for performing at least one of data collection from and data communication to at least one sensor in said wireless sensor network (col. 4, lines 36-41; Fig. 2).

Regarding claim 2: Chin et al. disclose deploying a plurality of said mobile data collectors, each having mobility that is unpredictable to the wireless sensor network (col. 4, line 37).

Regarding claim 7: Chin et al. disclose distributing sensors, including said at least one sensor, in the wireless sensor network, wherein the sensors are operable to capture measurement data for a feature of interest (col. 3, lines 38-40; Fig. 2).

Application/Control Number: 10/664,400

Art Unit: 2612

Regarding claim 8: Chin et al. disclose one sensor is operable to perform at least one of the following: capture measurement data for a feature of interest, sensing, actuation, computation, data storage, and forwarding data (col. 3, lines 38-62).

Regarding claim 9: Chin et al. disclose the mobile data collector comprises a general-purpose mobile communication device (col. 3, lines 56-62; col. 4, line 40).

Regarding claim 11: Chin et al. disclose the mobile data collector forms transient communication links with said at least one sensor (col. 3, lines 59-67).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chin et al. (US 6,844,814).

Regarding claim 10: Chin et al. does not disclose the data collector is from a group of cellular telephone, PDA, laptop computer, pager and a wireless communication device in a vehicle; however, Chin et al. disclose the data collector (21) is mobile and are controlled by one or more operators. Thus, a mobile device for control by an operator is obvious compact for the operator to maneuver. Therefore such compact devices are well known and used in cell phones, PDA or laptop computers.

Allowable Subject Matter

Claims 17-48 are allowed.

Claims 3-6 and 13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's Argument:

- Chin mentions that a base unit can be mobile; it fails to teach that the base unit has mobility that is unpredictable to the wireless sensor network.

Response to Argument:

- Chin discloses that the base unit can be mobile; thus, one of ordinary skill in the art would recognize that a mobile device is made to independently travel wherever it desires. Therefore, its path of travel is unpredictable to the network.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 2612

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Toan N. Pham whose telephone number is (571) 272-2967. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel J. Wu can be reached on (571) 272-2964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
